Release notes

Summary

This document contains the updates included in the Clinic version 4.186. There are no updates on the Patient application, Manage or Medical Content in this release. The changes are expected to be launched to production on the 30th of July.
Clinic

Changes in version 4.186

1	Pre-Call Screen Blurring Feature

In the new video solution Vonage healthcare personnel can now choose to enable a blurring effect before they join a video call. This is enabled directly from the pre-call screen. This setting is saved in the healthcare personnel's local storage so that their preference will be remembered for future calls in the same web browser.

Note that this update only applies to customers who are using the new video solution Vonage in the platform.

Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.
