

# Release notes

## Summary

This document contains the updates included in Clinic version 4.192, Medical content version 1.126 and in Metabase. There are no updates on the Patient application or Manage in this release. The changes are expected to be launched to production on the 17th of September.

## Clinic

### Changes in version 4.192

#### 1 Automatically launch async chat when creating a care plan

Now it is possible to automatically launch an async chat when creating an RPM care plan in order to reduce admin work. The chat will be assigned to the person that created the care plan, it will have the condition "RPM monitoring" and will be open for 10 years (unless it is closed before that).

In order to activate the automatic chat a customization should be added, please talk to your Customer Success Manager.

#### 2 New questionnaires and smart event for asthma in RPM (MDR)

**MD**

New questionnaires have been added as RPM activities for asthma.

This includes the following questionnaires:

- Asthma questionnaire
- ACT

- Side effect questionnaire
- Asthma medication questionnaire

In addition, a smart event has been added for the *Asthma questionnaire*. If the questionnaire has increased by 3 points or more since last measurement, an attestation with prio 1 will be created.

Adding the questionnaires and smart event to a care plan template requires configuration, please contact your Customer Success Manager to activate them.

## Medical Content

### Changes in version 1.126

#### Medical content populating the Triage product

##### 1 New self care advice for a number of questionnaires

A project is ongoing to write new and improved self care advice for a number of questionnaires. With this release the following questionnaires and/or conditions have new self care advice:

- Foot/heel pain
- Stress
- Stye
- Worm
- Oral sores from herpes
- Neck
- Known diagnosis of hypertension
- Shoulder pain
- Subconjunctival bleeding
- Earache

The changes apply directly upon release for all customers who use the questionnaires mentioned.

## Metabase - Standard report

### 1 Async meeting update

A change has been made to the data point “started async appointments” which will impact the data point when meetings were started. This is to align when the practitioner receives the patient instead of when the meeting was created by the patient. This will result in that some async appointments change starting dates.

This change will be applied to all customers in the Metabase Standard report after the release notes have been sent out.

## Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.

## Questions

If you have any questions, please contact Platform24 Support or your Customer Success Manager.
