

Release notes

Summary

This document contains the updates included in the Medical content version 1.131. There are no updates on the Patient application, Clinic or Manage in this release. The changes are expected to be launched to production on the 29th of October.

Medical Content

Changes in version 1.131

Medical content populating the Triage product

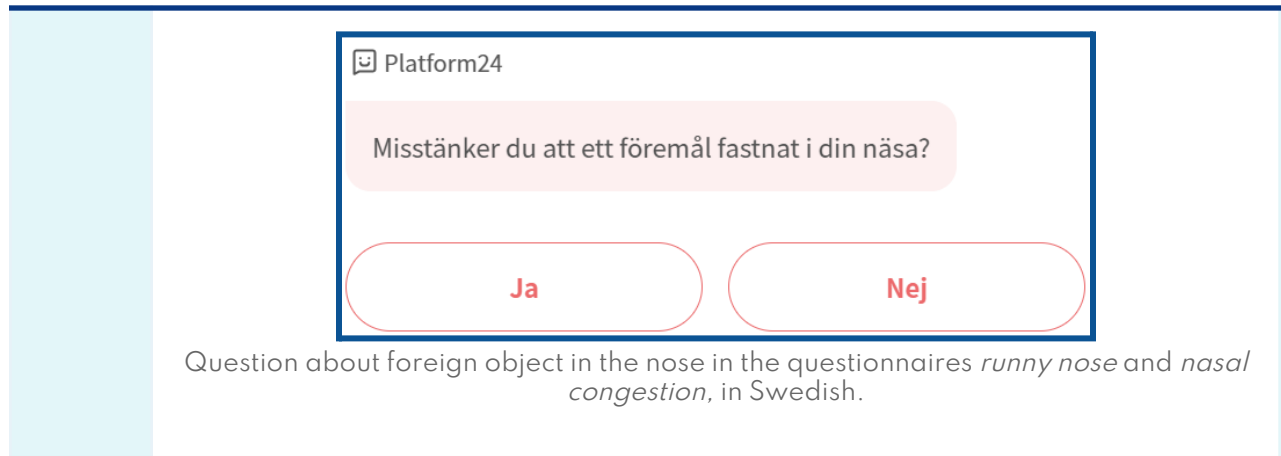

The following changes apply directly upon release for all customers who use the questionnaires mentioned.

1 Changed threshold for high blood pressure

To align with updated guidelines from RGS, the threshold for high blood pressure, without associated symptoms, has been changed from 230/130 mm/Hg to 180/110 mm/Hg. The urgency for this is acute, as previously.

2 Higher urgency level for foreign object in nose

To align with RGS, the urgency level for a foreign object in the nose when using the search word runny nose, has been changed from “acute” to “promptly”. This also means that the urgency level in the questionnaire *runny nose* now aligns with the same exit in the questionnaire *nasal congestion*.

Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.

Questions

If you have any questions, please contact Platform24 Support or your Customer Success Manager.
