Release notes

Summary

This document contains the updates included in the Patient application version 1.247 and Clinic version 4.217. There are no updates on Manage or the Medical content in this release. The changes are expected to be launched to production on the 25th of March.

Patient application

Changes in version 1.247

1 Enhanced video experience with clearer design and simpler controls

In this release, we are improving video meetings in the Patient app by modernizing the appearance and simplifying usage. It is now easier to select and pin participants in conversations, and the design has a brighter and clearer look.
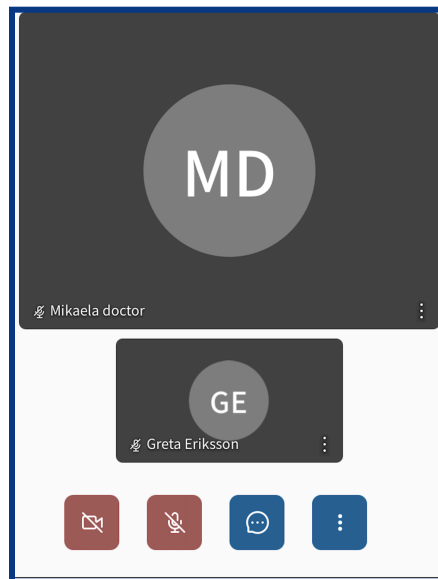

Improved video tile appearance

- The black background behind names and icons in the video tile has been removed.
- The background in the video tile is now soft gray instead of black, creating a brighter and clearer overview.

Easier participant pinning

- For desktop users, a new "hover" menu option now appears when the cursor is placed over the video tile. This menu includes the ability to quickly pin the desired participant.
- On mobile devices and tablets, there is a new button with three dots on each video tile. By clicking here, patients can easily pin selected participants.

- The previous pin button in the corner of the video tile has been removed and replaced by this new solution.

Clinic

Changes in version 4.217

1 ### Clearer design and more efficient management of video calls

In this update, practitioners receive a lighter and clearer video interface with faster access to important functions directly from participant video tiles. This simplifies the workflow and improves the overview during ongoing video calls.

Updated design of video tiles

- Just like in the Patient app, we have removed the black background box behind the participant's name and icons.
- The background color has been changed from black to soft gray to provide a lighter and clearer workflow for practitioners.

Improved management of participants directly in video tiles

- When the mouse cursor hovers over a video tile, a hover menu now appears. From this menu, practitioners can quickly choose to mute or pin participants, without having to go to the participant list. Please note that only practitioners can mute other participants.
- The previous pin button in the upper left corner has been removed and replaced by these new clearer options.

Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.

Questions
