

Release notes

Summary

This document contains the updates included in the Patient application version 1.255. There are no updates on Clinic, Manage or the Medical content in this release. The changes are expected to be launched to production on the 20th of May.

Patient application

Changes in version 1.255

1 Personalization of the Patient app start page based on information from customer integrations

It is now possible to personalize what appears on the start page for patients using integration parameters (e.g., listing information).

Personalization with integration parameters allows customers to control which information and healthcare services are shown to patients on the start page of the Patient app, improving the user experience.

Examples of use cases:

- Control what information and healthcare services the patient sees on the start page based on if they are listed or not within the care provider.
- Patients with different insurance levels are shown different healthcare services on the start page.

The start page personalization is compatible with already existing personalization parameters such as the patient's age, gender, children, and the care unit's opening hours.

Please contact your Customer Success Manager for more information on your available options and to activate this feature in the Patient app.

Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.

Questions

If you have any questions, please contact Platform24 Support or your Customer Success Manager.
