

Release notes

Summary

This document contains the updates included in Clinic version 4.245. There are no updates on the Patient application, Manage or the Medical content in this release. The changes are expected to be launched to production on the 30th of September.

Clinic

Changes in version 4.245

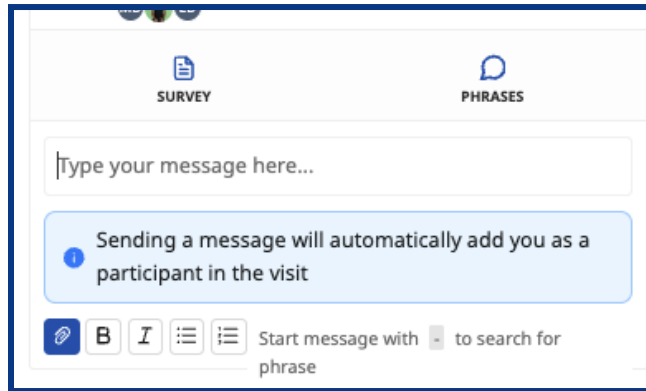

1 Practitioner automatically becomes participant when writing in an async errand

This change applies to all customers using async errands.

Currently, you become a participant by writing in the chat of an async errand. However, this behaviour was changed if *handover of ongoing async* was enabled (a feature currently being rolled out to customers).

Based on feedback we have received, we have decided to keep the feature of automatically becoming a participant when writing a message - regardless if you have *handover of ongoing async* enabled or not. This will reduce the number of clicks for practitioners.

We have also added an information text explaining that you will become a participant if you write a message in the chat.

Information text explaining that you as a practitioner will become a participant by sending a message.

Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.

Questions

If you have any questions, please contact Platform24 Support or your Customer Success Manager.
