

# Release notes

## Summary

This document contains the updates included in the Medical content version 1.163. There are no updates on the Patient application, Clinic or Manage in this release. The changes are expected to be launched to production on the 21st of October.

## Medical Content

### Changes in version 1.163

#### Medical content populating the Triage product

The changes apply directly upon release for all customers who use the questionnaires mentioned, except for those with customer-specific questionnaires.

##### 1 RGS update in the questionnaire *headache*

An update has been made in the questionnaire *headache* to conform with RGS. We are now introducing questions about duration and debut for patients with headache and issues with dizziness or balance.

With this change, we have hopefully also lowered the average urgency for patients with headache and issues with balance.

## 2 Response added to the constitutional symptoms question

To further improve the question about constitutional symptoms, a new response has been added:

- Heart palpitations or cold sweats.

## 3 Improvement in the questionnaire *allergy*

An attempt has been made to de-escalate patients with prolonged allergy symptoms that have worsened and where the patients report symptoms that place them in an *Immediate* exit due to suspected anaphylaxis.

## Observe!

What is included in the release notes is what is intended to be released. Be aware that the development is currently under regression testing and have to pass the tests in order to be released. Therefore, if a change is made to the release that will affect what is written in the release notes, a new version of release notes will be communicated.

## Questions

If you have any questions, please contact Platform24 Support or your Customer Success Manager.
